SUMMARY

Application Reliability-focused Associate Team Lead with 3.6+ years of experience in Java-based systems, distributed storage environments and large-scale automation at NetApp. Strong expertise in incident handling, deep Root Cause Analysis (RCA), and system failure diagnostics across APIs, storage, and Linux environments. Experienced in leading teams, resolving complex issues, and improving system performance through automation and optimization. Skilled in Java debugging, API behavior analysis, and production-like issue handling, with hands-on knowledge of JVM internals and observability tools (Splunk, Grafana) for monitoring and reliability engineering.

TECHNICAL SKILLS

- Programming Languages: Java, Python
- Automation & Frameworks: TestNG, Pytest, Cucumber
- API & Integration: REST APIs, Requests, ZAPI, CLI, Postman, Swagger
- Java & Performance Engineering: JVM internals, Garbage Collection (GC), Heap & Thread Dump analysis, Performance tuning
- Observability & Monitoring: Splunk, Grafana
- Reliability & Operations: Incident Management, Root Cause Analysis (RCA), System Stability, Failure Analysis
- CI/CD Tools: Jenkins
- Operating Systems: Linux (log analysis, basic administration), Windows

PROFESSIONAL EXPERIENCE

Associate Team Lead

VEvolve Software Pvt Ltd (Client: NetApp)

Sep 2025 – Present

- Leading a team of 5 engineers, managing task allocation, mentoring, and ensuring high-quality delivery.
- Driving deep Root Cause Analysis (RCA) for critical issues and implementing long-term fixes.
- Supporting incident-like scenarios, analyzing logs and failures for faster resolution.
- Collaborating with cross-functional teams during release readiness and failure handling.
- Improving system reliability through automation enhancements and failure prevention strategies.

Senior Software QA Automation Engineer

VEvolve Software Pvt Ltd (Client: NetApp)

Aug 2023 – Sep 2025

- Developed and maintained automation frameworks using Java (TestNG, Cucumber) and Python (Pytest).
- Performed API debugging and validation, identifying failures across REST and CLI interfaces.
- Worked on Java-based systems, analyzing logs, exceptions, and improving execution stability.
- Contributed to ONTAP Tools for Virtualization (OTV), supporting integration and system validation.

Junior Software Engineer

VEvolve Software Pvt Ltd (Client: NetApp)

Aug 2022 – Aug 2023

- Worked on system stabilization and defect resolution, performing RCA on recurring issues.
- Migrated APIs from ZAPI to REST/CLI, improving system reliability and maintainability.
- Used Python and Perl for automation, debugging, and system improvements.

EDUCATION

Bachelor of Technology (B.Tech), Electronics and Communication Engineering

North East Frontier Technical University (NEFTU) - Completed: 2025

KEY PROJECTS

ONTAP Tools for Virtualization (OTV) – Java-Based System Reliability & Automation

- Worked on Java-based automation framework (TestNG, Cucumber) for validating complex storage and virtualization workflows.
- Performed detailed analysis of Java-based application failures, including log inspection and exception tracking.
- Analyzed failures across distributed components (storage, APIs, vCenter integration).
- Managed large-scale test suites (~8000+ test cases) ensuring system stability across releases.
- Identified recurring failure patterns, improving system reliability and reducing defects.
- Collaborated with cross-functional teams for release readiness and issue resolution.

FBOT to CIT Migration – Performance Optimization

- Led migration of automation framework, improving execution architecture.
- Reduced execution time from 10+ hours to <2 hours.
- Improved system throughput and execution reliability.

Script Fixing & ONTAP Stabilization

- Worked on ONTAP release stabilization, ensuring codebase stability across multiple release cycles.
- Analyzed and resolved defects tracked in Jira (BURT issues) across multiple functional areas.
- Performed deep Root Cause Analysis (RCA) on recurring and critical failures.
- Debugged failures across automation frameworks, APIs, and system workflows, identifying root causes.
- Implemented fixes and validated them through end-to-end testing, ensuring no regression impact.
- Contributed to maintaining release quality, stability, and production readiness.
- Collaborated with cross-functional teams to prioritize and resolve high-impact defects.
- Identified recurring defect patterns and improved overall system stability.
